Welcome to the latest Channel Sales and Marketing Toolkit for HPE StoreEver.

This immersive, interactive kit includes everything you need to execute your own integrated demand generation campaigns.

The essence of HPE StoreEver tape messaging for Q1 FY25 is that you can preserve important, but infrequently accessed data, safer and smarter with the with HPE StoreEver tape systems. HPE StoreEver tape solutions are:

- Future ready.
- Highly scalable.
- Simple to manage.
- Cyber resilient.
- Massively expandable in easy steps as your needs grow.

As part of our efforts to drive awareness and consideration for the HPE StoreEver portfolio, we have updated banners, images and content available to the channel.

Visit the HPE StoreEver and Storage Supplies website hpestoragesupplies.com for more details on these services.

For local assistance, please contact your HPE StoreEver sales representative or email info@hpestoragesupplies.com

Why is selling tape still a relevant and profitable business?

A short introduction to the core components of the HPE Storage tape value proposition and why you should still regard LTO technology as a key part of your storage portfolio.

The value of tape

Key message

The enormous, data-driven potential of emerging technologies like 5G, AI, ML and IoT is creating a plethora of opportunities for businesses to transform their operations. The challenge is that though these opportunities abound, they are very diverse and may require very different storage optimisations.

The [HPE Storage](#) portfolio offers customers the most comprehensive choice of technologies, capacities and performance capabilities for current and future data storage-centric workloads. Accelerate data-first modernisation with HPE storage products to radically simplify data management with the industry's most comprehensive solutions to store, manage, and protect data across hybrid cloud.

HPE StoreEver LTO tape systems are a vital part of this portfolio and **they can be sold as part of a GreenLake deal**. Tape offers enormous density in a cyber-resilient, scalable and flexible form factor, which can start small but grow very big indeed, while costing less to run and own than other archival storage alternatives.

Target audience

Businesses who want to underpin their transition to 'data first' organisations by deploying **HPE StoreEver MSL3040 (or other HPE StoreEver solutions)** to:

- Reduce the cost of deep archival storage.
- Minimise power and cooling needs.
- Reduce operating expense.
- Provide more efficient compliance processes.
- Provide greater security against ransomware threats, both on/off prem.

Messaging themes

- Modernise into a true data-first organisation and gain competitive advantage through data.
- Build firmer foundations for your hybrid cloud infrastructure.
- Operate smarter with HPE's unique tape management features.

HPE StoreEver MSL3040 Tape Library Messaging Framework

Essence	Preserve important, but infrequently accessed, data safer and smarter with the HPE StoreEver MSL3040. A future-ready, highly scalable, simple-to-manage, cyber resilient tape system you can massively expand in easy steps as your needs grow.		
Key Message	The enormous, data-driven potential of emerging technologies like AI, ML and IoT is creating a plethora of opportunities for businesses to transform their operations. The challenge is that though these opportunities abound, they are truly diverse and may require very different storage optimisations. And any business that is trying to manage typical data growth rates of around 40-50% per year has a number of considerations when developing its strategic approach to data storage. ROI is important as the world navigates the post-Covid recovery period. IT budgets must deliver value. The enhanced HPE StoreEver MSL3040 tape library (which can also be deployed on a pay-per-use, OPEX basis via HPE GreenLake for Tape Libraries) offers enormous density in a cyber-resilient, scalable and flexible form factor. With the MSL3040, you can start small but scale massively, with a much lower TCO than other longer term archival storage alternatives.		
Target Audience	Businesses with several PB of archive data, wanting to underpin their transition to becoming 'data first' organisations by deploying the scalable (3U block) capabilities of the HPE StoreEver MSL3040 to reduce the cost of archival storage, minimise power and cooling needs, reduce OPEX, provide more efficient compliance processes and greater security against cyber threats, both on/off prem.		
Strategic Themes	Modernise into a true data-first organisation and gain competitive advantage through data	Build firmer and more sustainable foundations for your hybrid cloud	Operate smarter while remaining secure
Benefit in Action	<ul style="list-style-type: none"> • Use resources more efficiently and precisely due to the scalable modular capabilities of the MSL3040 – start small, grow big in 3U units. • Reduce cost and maximise ROI with better utilisation of rack space – almost 600 TB per 1U. • Ask better questions because you can scale out to place all your data under your control: store huge data oceans with the ultra dense capacity of the 640 slot, 28.8 PB MSL3040 – reduces barriers to being 'data-first'. • Get better answers, more quickly, and gain competitive advantage in identifying customer needs, NPD, Supply Chain, Manufacturing by being able to store all your unstructured data on prem and under your control. 	<ul style="list-style-type: none"> • Deploy HPE StoreEver through traditional 'buy to own' or via consumption based, pay per use, HPE GreenLake Flex Solution built for Tape Libraries. • Cutting through the tangle of today's data management complexities will drive customer innovation, mitigate risks and increase business stakeholder satisfaction. • Combine cloud and on-prem archive storage using native S3 object data to tape solutions such as PoINT Archival Gateway. • Improve brand perceptions around sustainability concerns thanks to minimal energy consumption. 	<ul style="list-style-type: none"> • Save time and work smarter with HPE Command View for Tape Libraries, which brings the power of predictive analytics to managing your MSL3040 from any location. • Reduce the impact of cyberattack and other hostile incidents with the HPE MSL Encryption Kit, a unique, self-contained encryption solution which strengthens the innate air gap capabilities of a modern tape system. • Deploy infrastructure faster, simplify lifecycle operations, and increase productivity with modular flexibility, seamless upgrades and no additional licence fees for installing new drives in an existing library. • Free up IT resources/budget for more value-added tasks. HPE MSL3040 libraries are designed to be easy to access, expand, maintain, backed up by HPE Services.

Don't trust hackers to return your data. Trust HPE StoreEver

In a study by ESG, only one in seven businesses that confirmed meeting ransom demands said they could restore all their data afterwards. By using HPE StoreEver tape technology, you can strengthen your cybersecurity defences with a true, offline “air gap” between criminals and your data.

How to use HPE social content

Inside this document you will find 12 weeks of material for posting daily content related to tape, data storage and important trends like cybersecurity, managing data for competitive advantage and sustainability. You can use this content however you wish to develop your own social media program. Editorial copy is pre-formatted for both Twitter and LinkedIn.

INSIC Technology Roadmap Wordplay Video

[Download short video](#)

This short video captures the highlights of the new INSIC roadmap. It's a great Call to Action (CTA), for tape awareness campaigns that explain why LTO technology is helping companies manage the colossal archival storage requirements of the Zettabyte Era.

LTO Program Ransomware White Paper Wordplay Video

[Download short video](#)

This short video is an ideal CTA for marketing campaigns addressing the benefit of tape in supporting business and IT strategies for tackling the ransomware threat. It promotes a white paper by cybersecurity expert, David Balcar, published by the LTO Program.

The Four S's of the value of tape

HPE defines the value of tape as being comprised of four essential elements: the four S's.

Scalability	more efficient means storing of infrequently accessed, but important, data, and ultimately, better use of budget and resources.
Security	protection against ransomware.
Savings	inexpensive backup storage and lowest TCO for long term archiving. ¹
Sustainability	less energy consuming, more sustainable storage. ¹
